

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

organism as "Cryptozoön" would be, is not probable. Perhaps the structure is the shell of some specialized organism included in the concretion. Until someone can find organic structures in "Cryptozoön" the description of new species is an unnecessary burden to science.

*On the Radioactive Matter in the Earth and the Atmosphere.* By A. S. EVE. Separate from the *Philosophical Magazine*, September, 1906, pp. 189-200.

For geologists, the most important feature of this paper is the determination of the radioactive matter in the earth's crust. "About  $1.8 \times 10^{-11}$  grams of radium bromide is the estimated equivalent of the active matter per c.c. present in the earth's crust sufficient to account for the penetrating radiation." This is four times the average amount found by Strutt by direct observation on rock specimens.
